

Solar Charging Devices

Alternative Power Architecture (APA) will be available as an option for the Intel® Education 2 in 1 in the near future. APA enables a truly “plug-and-play” solar charging experience for the students. The ability to charge using a small portable solar panel make this platform ideal for students in locations that don’t have access to grid power.

The Smart Solar Controller enables the charging of devices with or without APA. It is being used to provide charging outlets for the Intel Classmate PC.
