

TESTIMONIAL

Intel Inside®

Home Servers - Automatic daily backup

“The most valuable feature is...that my computers are backed up – daily.”

The experience of a complete hard drive failure—and the cost and agony of all that lost data—made Chris Kenney realize the importance of having a reliable backup and data protection scheme for his three home computers. That’s why he got an Intel® processor-based HP MediaSmart Home Server*.

Now he doesn’t have to worry about whether his data and computers are properly protected. He doesn’t have to fuss over it or monitor it; the Home Server just takes care of it—completely. Although he hasn’t yet had to turn to his Home Server to restore one of his computers, he knows it will be a snap when the time comes. In his words, this has been Chris Kenney’s experience:

Chris Kenney trusts his Home Server for backup and data protection – completely

Simple Setup Got Us Going

“You really don’t even need any documentation; there are only a few connections to make. You plug it into your network with an Ethernet cable and plug it into the power, turn it on and install the software and it steps you through. It’s really simple.”

“The simple setup got us going right away with using it to backup our computers—which is at minimum what we wanted to do with it, provide a level of protection for our data.”

Backup! Lesson Learned

“We initially started using it to backup three computers in our home; we have two desktops and a laptop. We had previously lost a hard drive in a computer that wasn’t backed up, so we learned a lesson the hard way.”

“Now we protect ourselves by doing an image backup with the HP Home Server. In the event of a hard drive failure or even if you want to just change to a larger hard drive because they are getting cheaper all the time, it’s fairly straightforward to do with the software and procedure that HP provides.”

“Probably the most valuable feature is the assurance I have that my computers are backed up even in the event of a hardware failure. I have tried other back-up methods, but none of them are as simple to use as the HP MediaSmart Home Server.”

“It’s a complete snapshot of that computer. And it runs on a daily basis, so it is as current as the previous day’s backup.”

Trusted Implicitly

“I’ve transferred all of our digital photos onto the Home Server, so now we have one central storage location. And we’re using the feature that allows us to backup those files as well. So we are protected; we aren’t going to lose that information.”

“I don’t have to worry about it at all. I can look at the toolbar on the various PCs and know that the Home Server is connected to them and that it’s doing the backups. And if I wonder if it had worked or not there is always a log you can go and check to verify. But it just works, with no problems at all, and it doesn’t require constant attention or supervision as a user. That’s a really nice feature.”

Other Cool Stuff

"I have enabled some of the additional features in the Home Server. We use iTunes* with an iPod* and iTunes music service, and we're utilizing the iTunes application on the server to stream music to the various computers in our home."

"We have iTunes on various PCs, and we are able to centrally locate the database containing all of our music files. From any of the PCs in our home, we are able to access that music collection and stream it to those different PCs."

What a Home Server Can Do For You

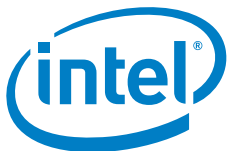

Just like Chris Kenney, you can use a Home Server to backup the PCs and other connected devices in your home. It runs automatically so you can rest assured your data—and your configurations—are protected. Just make sure you choose a Home Server with Intel Inside® so you get the value, reliability, and quality you've come to expect from the global leader in PC processor technology.

"Probably the most valuable feature is the assurance I have that my computers are backed up even in the event of a hardware failure."

– Chris Kenney
