If an FCC declaration of conformity marking is present on the board, the following statement applies:

**FCC Declaration of Conformity**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For questions related to the EMC performance of this product, contact:

Intel Corporation  
5200 N.E. Elam Young Parkway  
Hillsboro, OR  97124  
1-800-628-8686

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.  
- Increase the separation between the equipment and the receiver.  
- Connect the equipment to an outlet on a circuit other than the one to which the receiver is connected.  
- Consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications to the equipment not expressly approved by Intel Corporation could void the user's authority to operate the equipment.

Tested to comply with FCC standards for home or office use.

**Canadian Department of Communications Compliance Statement**

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Le présent appareil numérique n'émet pas de bruits radioélectriques dépassant les limites applicables aux appareils numériques de Classe B prescrites dans le Règlement sur le brouillage radioélectrique édicté par le ministère des Communications du Canada.

**Disclaimer**

Information in this document is provided in connection with Intel® products. No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document. Except as provided in Intel's Terms and Conditions of Sale for such products, Intel assumes no liability whatsoever, and Intel disclaims any express or implied warranty, relating to sale and/or use of Intel products including liability or warranties relating to fitness for a particular purpose, merchantability, or infringement of any patent, copyright or other intellectual property right. Intel products are not intended for use in medical, life saving, or life sustaining applications. Intel may make changes to specifications and product descriptions at any time, without notice.

Workstation Board S975XBX2 may contain design defects or errors known as errata which may cause the product to deviate from published specifications. Current characterized errata are available on request.

Contact your local Intel sales office or your distributor to obtain the latest specifications and before placing your product order.

Preface

This Product Guide gives information about board layout, component installation, BIOS updates, and regulatory requirements for Intel® Workstation Board S975XBX2.

Intended Audience

The Product Guide is intended only for technically qualified personnel.

Use Only for Intended Applications

All Intel workstation boards are evaluated as Information Technology Equipment (I.T.E.) for use in personal computers (PCs) for installation in homes, offices, schools, computer rooms, and similar locations. The suitability of this product for other PC or embedded non-PC applications or other environments, such as medical, industrial, alarm systems, test equipment, etc. may not be supported without further evaluation by Intel.

Document Layout

The chapters in this Product Guide are arranged as follows:

1. Workstation Board Features: a summary of product features
2. Installing and Replacing Workstation Board Components: instructions on how to install the workstation board and other hardware components
3. Updating the BIOS: instructions on how to update the BIOS
4. Configuring for RAID (Intel® Matrix Storage Technology) Requires Microsoft Windows® XP or 2000 and SATA Hard Drive(s): information about configuring your system for RAID
   A. Error Messages and Indicators: information about BIOS error messages and beep codes
   B. Regulatory Compliance: safety and EMC regulations, product certification

Conventions

The following conventions are used in this manual:

CAUTION

Cautions warn the user about how to prevent damage to hardware or loss of data.

NOTE

Notes call attention to important information.
Terminology

The table below gives descriptions to some common terms used in the product guide.

<table>
<thead>
<tr>

Box Contents

- Intel® Workstation Board
- I/O shield
- One ATA-66/100 cable
- One diskette drive cable
- Four Serial ATA cables
- Two Serial ATA power supply cables
- One 2x2 to 2x4 power supply cable adapter
- Intel® driver CD-ROM
- One diskette with the Intel® Matrix Storage RAID driver
- One diskette with the Marvell SATA Controller RAID driver
- Quick Reference poster
- Integration Guide poster
- Printed Product Guide
- Configuration and battery caution statement label

</tbody>
</table>
| Main Memory        | • Four 240-pin SDRAM Dual Inline Memory Module (DIMM) sockets  
                      • 667/533 MHz dual channel DDR2 SDRAM interface  
                      • Support for ECC and non-ECC memory  
                      • Designed to support up to 8 GB of system memory |
| Chipset            | Intel® 975X Express Chipset consisting of:  
                      • Intel® 82975X Memory Controller Hub (MCH) with Direct Media Interface  
                      • Intel® 82801GR I/O Controller Hub (ICH7R) supporting Intel® Matrix Storage Technology |
| Graphics           | Support for Multiple PCI Express* Graphics cards |
| Audio              | Up to 6-channel onboard subsystem, featuring:  
                      • Intel® High Definition Audio interface  
                      • SigmaTel* STAC9227 audio codec |
| Expansion Capabilities | • Two PCI bus add-in card connectors  
                      • One PCI Express x16 connector (electrical x16 or x8)  
                      • One PCI Express x16 connector (electrical x8)  
                      • One PCI Express x16 connector (electrical x4) |
| LAN Support        | Intel® 82573E Gigabit Ethernet LAN controller with RJ-45 connector |
| BIOS               | • Intel® Platform Innovation Framework for Extensible Firmware Interface  
                      • 8 Mbit Serial Peripheral Interface (SPI) device  
                      • Support for SMBIOS  
                      • Intel® Rapid BIOS Boot  
                      • Intel® Express BIOS Update |
| RAID               | • Intel® Matrix Storage Technology for Serial ATA  
                      • Marvell 88SE6141* for Serial ATA |

continued
Table 1. Feature Summary (continued)

| Peripheral Interfaces | • One front panel audio header (yellow)     |
|                       | • Up to eight USB 2.0 ports:               |
|                       |   — Four ports routed to the back panel   |
|                       |   — Four ports routed to two USB headers  |
|                       | • Eight Serial ATA channels (one device per channel): |
|                       |   — Four RAID capable Serial ATA (3.0 Gb/s) connectors (black) via the ICH7R |
|                       |   — Three RAID capable Serial ATA (3.0 Gb/s) connectors (blue) via the Marvell RAID controller |
|                       |   — One RAID capable Serial ATA (3.0 Gb/s) connector via the Marvell RAID controller, compatible with an external Serial ATA drive (red) |
|                       | • Up to two IEEE 1394a ports:             |
|                       |   — One IEEE 1394a port routed to the back panel |
|                       |   — One IEEE 1394a header (blue)          |
|                       | • One IDE interface with ATA-66/100 support |
|                       | • One diskette drive interface            |
|                       | • One parallel port                       |
|                       | • One serial port                         |
|                       | • RJ-45 LAN port                          |
|                       | • PS/2* keyboard and mouse ports          |

| Power Management      | • Support for Advanced Configuration and Power Interface (ACPI) |
|                       | • Suspend to RAM (STR)                                   |
|                       | • Wake on USB, PCI, PCI Express, PS/2, LAN, and front panel |

| Hardware Management   | Hardware monitor with:                                  |
|                       |   • Four fan sensing inputs used to monitor fan activity |
|                       |   • Remote diode temperature sensing                    |
|                       |   • Intel® Precision Cooling Technology fan speed control |
|                       |   • Voltage sensing to detect out of range values       |

Processor

CAUTION
Failure to use the appropriate power supply (below) and/or not connecting the 12 V (2x4) power connector to the workstation board may result in damage to the board or the system may not function properly.

The workstation board S975XBX2 supports an Intel® processor in the LGA775 package. Processors are not included with the workstation board and must be purchased separately. The processor connects to the Intel workstation board through the LGA775 socket.

The supported processors list for Workstation Board S975XBX2 is located on the web at: http://support.intel.com/support/motherboards/server/

Main Memory

NOTE
To be fully compliant with all applicable Intel® SDRAM memory specifications, the workstation board should be populated with DIMMs that support the Serial Presence Detect (SPD) data structure. If your memory modules do not support SPD, you will see a notification to this effect on the screen at power up. The BIOS will attempt to configure the memory controller for normal operation.

The workstation board supports dual or single channel memory configurations defined below:

- Four 240-pin Double Data Rate 2 (DDR2) SDRAM Dual Inline Memory Module (DIMMs) connectors with gold-plated contacts.
- Support for:
  - Unbuffered, non-registered single or double-sided DIMMs
  - ECC and non-ECC DDR2 667/533 MHz memory
  - Serial Presence Detect (SPD) memory only
- Memory configuration listed below:
  - Up to 2.0 GB utilizing 256 Mb technology
  - Up to 4.0 GB utilizing 512 Mb or 1 Gb technology
  - Up to 8.0 GB utilizing 1 Gb technology

Intel® 975X Express Chipset

The Intel 975X Express Chipset consists of the following devices:

- Intel 82975X Memory Controller Hub (MCH) with Direct Media Interface
- Intel 82801GR I/O Controller Hub (ICH7R)

Audio Subsystem

The workstation board S975XBX2 includes a flexible 6-channel audio subsystem based on a SigmaTel STAC9227 audio codec:

The audio subsystem features:

- Intel High Definition Audio interface
- Impedance sensing capability for jack re-tasking
- S/N (signal-to-noise) ratio: > 90 dB
- Power management support for ACPI 2.0 (driver dependent)
- Intel 82801GR I/O Controller Hub (ICH7R)
- Microphone input that supports:
  - Microphone array
  - Acoustic Echo (AEC)
  - Beam Forming (BF)
  - Noise Suppression (NX) technology

The subsystem includes the following connectors:

- Front panel audio connector, including pins for:
  - Line out
  - Mic
- Back panel audio connectors that are configurable through the drivers of the audio devices:
  - Line in
  - Three Line out
  - Mic in or Center LFE out
- Two digital Line out:
One coaxial Line out

Related Links
Go to the following link or pages for more information about:
- Audio drivers and utilities http://support.intel.com/support/motherboards/server/

Input/Output (I/O) Controller

The super I/O controller features the following:
- One serial port
- One parallel port with Extended Capabilities Port (ECP) and Enhanced Parallel Port (EPP) support
- Serial IRQ interface compatible with serialized IRQ support for PCI systems
- PS/2-style mouse and keyboard interfaces
- Interface for one 1.2 MB, 1.44 MB, or 2.88 MB diskette drive
- Intelligent power management, including a programmable wake up event interface
- PCI power management support

LAN Subsystem

The LAN, with the Intel 82801GR I/O Controller Hub, provides a Fast PCI LAN subsystem. The LAN subsystem provides the following functions:
- Intel 82573E Ethernet LAN supporting 10/100/1000 Mbit/sec
- Support for RJ-45 connector with status indicator LEDs
- Configurable EEPROM that contains the MAC address

LAN Subsystem Software
For LAN software and drivers, refer to the S975XBX2 link on Intel’s World Wide Web site at:
http://support.intel.com/support/motherboards/server
RJ-45 LAN Connector LEDs

Two LEDs are built into the RJ-45 LAN connector located on the back panel (see Figure 2). These LEDs indicate the status of the LAN.

![Figure 2. LAN Connector LEDs](image)

Table 3 describes the LED states when the board is powered up and the 10/100/1000 Gigabit Ethernet LAN subsystem is operating.

Hi-Speed USB 2.0 Support

NOTE

Computer systems that have an unshielded cable attached to a USB port might not meet FCC Class B requirements, even if no device or a low-speed USB device is attached to the cable. Use a shielded cable that meets the requirements for a full-speed USB device.

The workstation board supports up to eight USB 2.0 ports via ICH7; four ports routed to the back panel and four routed to two internal USB 2.0 headers. USB 2.0 ports are backward compatible with USB 1.1 devices. USB 1.1 devices will function normally at USB 1.1 speeds.

USB 2.0 support requires both an operating system and drivers that fully support USB 2.0 transfer rates. Disabling Hi-Speed USB in the BIOS reverts all USB 2.0 ports to USB 1.1 operation. This may be required to accommodate operating systems that do not support USB 2.0.

Enhanced IDE Interface

The ICH7 IDE interface handles the exchange of information between the processor and peripheral devices like hard disks, CD-ROM drives, and Iomega Zip* drives inside the computer. The interface supports:

- Up to two IDE devices (such as hard drives)
- ATAPI-style devices (such as CD-ROM drives)
- Older PIO Mode devices
- Ultra DMA-33 and ATA-66/100 protocols

Serial ATA

The workstation board supports eight Serial ATA channels, connecting one device per channel in either a RAID or a non-RAID configuration.

Expandability

For system expansion, the workstation board supports the following:

- One PCI Express x16 card as an electrical x16 card or two PCI Express x16 cards as electrical x8 cards
- One PCI Express x16 card as an electrical x4 card
- Two PCI bus add-in cards

Related Links

For information about installing a PCI Express x16 card, see page 38 in Chapter 2.
BIOS

The BIOS provides the Power-On Self-Test (POST), the BIOS Setup program, the PCI and IDE auto-configuration utilities, and the video BIOS.

See Chapter 3 on page 59 for more information about the BIOS.

Serial ATA and IDE Auto Configuration

If you connect a Serial ATA or IDE device (such as a hard drive) to your workstation board, the auto-configuration utility in the BIOS automatically detects and configures the device for your computer. You do not need to run the BIOS Setup program after installing a Serial ATA or IDE device. You can override the auto-configuration options by specifying manual configuration in the BIOS Setup program.

When booting from a Serial ATA device, the device connected to Serial ATA connector 0 is the first boot device and the device connected to Serial ATA connector 3 is the last boot device by default.

PCI and PCI Express* Auto Configuration

If you install a PCI/PCI Express add-in card in your workstation board, the PCI/PCI Express auto-configuration utility in the BIOS automatically detects and configures the resources (IRQs, DMA channels, and I/O space) for that add-in card. You do not need to run the BIOS Setup program after you install a PCI/PCI Express add-in card.

Security Passwords

The BIOS includes security features that restrict whether the BIOS Setup program can be accessed and who can boot the computer. A supervisor password and a user password can be set for the BIOS Setup and for booting the computer, with the following restrictions:

- The supervisor password gives unrestricted access to view and change all Setup options. If only the supervisor password is set, pressing <Enter> at the password prompt of Setup gives the user restricted access to Setup.
- If both the supervisor and user passwords are set, you must enter either the supervisor password or the user password to access Setup. Setup options are then available for viewing and changing depending on whether the supervisor or user password was entered.
- Setting a user password restricts who can boot the computer. The password prompt is displayed before the computer is booted. If only the supervisor password is set, the computer boots without asking for a password. If both passwords are set, you can enter either password to boot the computer.

Related Links:

For instructions on resetting the password, see Clearing Passwords on page 52.
Chassis Intrusion

The workstation board supports a chassis security feature that detects if the chassis cover has been removed. The security feature uses a mechanical switch on the chassis that can be connected to the chassis intrusion header on the workstation board. See Figure 27 on page 50 for the location of the chassis intrusion header.

Power Management Features

Power management is implemented at several levels, including:

- Advanced Configuration and Power Interface (ACPI)
- Hardware support:
  - Fan connectors
  - Suspend to RAM (Instantly Available PC technology)
  - Resume on Ring
  - Wake from USB
  - Wake from PS/2 keyboard/mouse
  - PME# wakeup support

ACPI

ACPI gives the operating system direct control over the power management and Plug and Play functions of a computer. The use of ACPI with the workstation board requires an operating system that provides full ACPI support.

Fan Connectors

Workstation Board S975XBX2 has three chassis fan connectors (two 3-pin and one 4-pin) and one processor fan connector (4-pin).

Fan Speed Control (Intel® Precision Cooling Technology)

Intel Precision Cooling Technology automatically adjusts the processor fan speed based on the processor temperature and adjusts the chassis fan speeds depending on the system temperature. System fan noise may be reduced by operating controlled chassis and processor fans at the minimum necessary speeds.

The processor and chassis fan speed control features can be disabled independently through the workstation board BIOS. Disabling the processor fan speed control will result in the fan operating at full speed if it is not a self controlled fan. It is recommended that processor fan speed control remain enabled (default BIOS setting) when using the processor fan heat-sink included with Intel® boxed processors. Disabling the chassis fan speed control results in chassis fans always operating at full speed. The chassis fan speed control feature should be disabled if a self-controlled chassis fan is attached to any controlled chassis fan header.

The overall system noise reduction will vary based on system configuration and environment.
Suspend to RAM (Instantly Available PC Technology)

CAUTION
For Instantly Available PC technology, the 5 V standby line for the power supply must be capable of delivering adequate +5 V standby current. Failure to provide adequate standby current when using this feature can damage the power supply and/or affect ACPI S3 sleep state functionality.

CAUTION
Power supplies used with this workstation board must be able to provide enough standby current to support the standard Instantly Available (ACPI S3 sleep state) configuration. If the standby current necessary to support multiple wake events from the PCI and/or USB buses exceeds power supply capacity, the workstation board may lose register settings stored in memory.

Instantly Available PC technology enables the board to enter the ACPI S3 (Suspend-to-RAM) sleep state. While in the S3 sleep state, the computer will appear to be off. When signaled by a wake-up device or event, the system quickly returns to its last known awake state.

The workstation board’s standby power indicator, shown in Figure 3, is lit when there is standby power to the system. This includes the memory modules and PCI bus connectors, even when the computer appears to be off.

If the system has a dual-colored power LED on the front panel, the sleep state is indicated by the LED turning amber.

![Figure 3. Location of Standby Power Indicator](OM10764)

Related Links
For more information on standby current requirements for the workstation board, go to the link below, select the workstation board name, and then select Technical Documentation:
http://developer.intel.com/products/motherboard/
Resume on Ring

The operation of Resume on Ring can be summarized as follows:
- Resumes operation from either ACPI S1 or ACPI S3 state
- Requires only one call to access the computer
- Detects incoming call similarly for external and internal modems
- Requires modem interrupt be unmasked for correct operation

Wake from USB

**NOTE**

Wake from USB requires the use of a USB peripheral that supports Wake from USB.

USB bus activity wakes the computer from an ACPI S1 or S3 state.

Wake from PS/2* Keyboard/Mouse

PS/2 keyboard/mouse activity wakes the computer from an ACPI S1 or S3 state.

PME# Wakeup Support

When the PME# signal on the PCI bus is asserted, the computer wakes from an ACPI S1, S3, or S5 state.
**Speaker**

A speaker is mounted on the workstation board. The speaker provides audible error code (beep code) information during the Power-On Self-Test (POST).

**Battery**

A battery on the workstation board keeps the values in CMOS RAM and the clock current when the computer is turned off. See Chapter 2 starting on page 25 for instructions on how to replace the battery.

**Real-Time Clock**

The workstation board has a time-of-day clock and 100-year calendar. The battery on the workstation board keeps the clock current when the computer is turned off.
This chapter tells you how to:
- Install the I/O shield
- Install and remove the workstation board
- Install and remove a processor
- Install and remove memory
- Install and remove a PCI Express x16 add-in card
- Connect the IDE and Serial ATA cables
- Connect internal headers
- Install external Serial ATA adapter
- Connect chassis fan and power supply cables
- Identify other connectors
- Set the BIOS configuration jumper
- Clear passwords
- Identify back panel connectors
- Replace the battery

Before You Begin

**CAUTIONS**

The procedures in this chapter assume familiarity with the general terminology associated with personal computers and with the safety practices and regulatory compliance required for using and modifying electronic equipment.

Disconnect the computer from its power source and from any telecommunications links, networks, or modems before performing any of the procedures described in this chapter. Failure to disconnect power, telecommunications links, networks, or modems before you open the computer or perform any procedures can result in personal injury or equipment damage. Some circuitry on the board can continue to operate even though the front panel power button is off.

Follow these guidelines before you begin:
- Always follow the steps in each procedure in the correct order.
- Set up a log to record information about your computer, such as model, serial numbers, installed options, and configuration information.
- Electrostatic discharge (ESD) can damage components. Perform the procedures described in this chapter only at an ESD workstation using an antistatic wrist strap and a conductive foam pad. If such a station is not available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.
Installation Precautions

When you install and test the Intel workstation board, observe all warnings and cautions in the installation instructions.

To avoid injury, be careful of:

- Sharp pins on connectors
- Sharp pins on printed circuit assemblies
- Rough edges and sharp corners on the chassis
- Hot components (like processors, voltage regulators, and heat sinks)
- Damage to wires that could cause a short circuit

Observe all warnings and cautions that instruct you to refer computer servicing to qualified technical personnel.

Prevent Power Supply Overload

Do not overload the power supply output. To avoid overloading the power supply, make sure that the calculated total current loads of all the modules within the computer is less than the output current rating of each of the power supplies output circuits.

Observe Safety and Regulatory Requirements

Read and adhere the instructions in this section and the instructions supplied with the chassis and associated modules. If you do not follow these instructions and the instructions provided by the chassis and module suppliers, you increase safety risk and the possibility of noncompliance with regional laws and regulations. If the instructions for the chassis are inconsistent with these instructions or the instructions for associated modules, contact the supplier’s technical support to find out how you can ensure that your computer meets safety and regulatory requirements.

Related Links

For information about regulatory compliance, go to Appendix B on page 67.
Installing the I/O Shield

The workstation board comes with an I/O shield. When installed in the chassis, the shield blocks radio frequency transmissions, protects internal components from dust and foreign objects, and promotes correct airflow within the chassis.

Install the I/O shield before installing the workstation board in the chassis. Place the shield inside the chassis as shown in Figure 4. Press the shield into place so that it fits tightly and securely. If the shield does not fit, obtain a properly sized shield from the chassis supplier.

Figure 4. Installing the I/O Shield
Installing and Removing the Workstation Board

**CAUTION**

Only qualified technical personnel should do this procedure. Disconnect the computer from its power source before performing the procedures described here. Failure to disconnect the power before you open the computer can result in personal injury or equipment damage.

Do not lift or handle the workstation board by the chipset heat sink. Handling may damage the thermal interface material that resides between the heat sink and the chipset silicon.

**NOTE**

Refer to Appendix B for regulatory requirements.

Refer to your chassis manual for instructions on installing and removing the workstation board.

Figure 5 shows the location of the 10 mounting screw holes for Workstation Board S975XBX2.
Figure 5. Location of Mounting Screw Holes
Installing and Removing a Processor

Instructions on how to install the processor on the workstation board are given below.

Installing a Processor

**CAUTION**

*Before installing or removing the processor, make sure that AC power has been removed by unplugging the power cord from the computer; the standby power LED should not be lit (see Figure 3 on page 21). Failure to do so could damage the processor and the board.*

To install a processor, follow these instructions:
1. Observe the precautions in "Before You Begin" on page 25.
2. Open the socket lever by pushing the lever down and away from the socket (see Figure 6, A and B).

---

3. Lift the load plate (Figure 7, A). Do not touch the socket contacts (Figure 7, B).

---

**Figure 6. Lift Socket Lever**

**Figure 7. Lift the Load Plate**
4. Remove the protective socket cover from the load plate (see Figure 8). Do not discard the protective socket cover. Always replace the socket cover if the processor is removed from the socket.

**Figure 8. Remove the Protective Socket Cover**

5. Remove the processor from its protective cover. Hold the processor only at the edges, being careful not to touch the bottom of the processor (see Figure 9). Do not discard the protective processor cover. Always replace the processor cover if the processor is removed from the socket.

**Figure 9. Remove the Processor from the Protective Processor Cover**
6. Hold the processor with your thumb and index fingers oriented as shown in Figure 10. Make sure fingers align to the socket cutouts (Figure 10, A). Align notches (Figure 10, B) with the socket (Figure 10, C). Lower the processor straight down without tilting or sliding it in the socket.

Figure 10. Install the Processor

7. While pressing down on the load plate (Figure 11, A), close and engage the socket lever (Figure 11, B).

Figure 11. Close the Load Plate
Installing the Processor Fan Heat Sink

Workstation Board S975XBX2 has an integrated processor fan heat sink retention mechanism (RM). For instructions on how to attach the processor fan heat sink to the integrated processor fan heat sink RM, refer to the boxed processor manual or the Intel World Wide Web site at:

Integration of the Boxed Intel® Pentium® 4 Processor in the 775-Land Package

Connecting the Processor Fan Heat Sink Cable

Connect the processor fan heat sink cable to the 4-pin processor fan header (see Figure 12). A fan with a 4-pin connector as shown in Figure 12, A is recommended; however, a fan with a 3-pin connector (Figure 12, B) can be used. Since the 3-pin fan cannot use the on-board fan control, the fan will always operate at full speed.

Removal of the Processor

For instructions on how to remove the processor fan heat sink and processor, refer to the processor installation manual or the Intel World Wide Web site at:

Integration of the Boxed Intel® Pentium® 4 Processor in the 775-Land Package
Installing and Removing Memory

Workstation Board S975XBX2 has four 240-pin DIMM sockets arranged as DIMM 0 and DIMM 1 in both Channel A and Channel B, as shown in Figure 17.

Guidelines for Dual Channel Memory Configuration

Before installing DIMMs, read and follow these guidelines for dual channel configuration.

Two or Four DIMMs

Install a matched pair of DIMMs equal in speed and size (see Figure 13) in DIMM 0 (blue) of both channels A and B.

![Figure 13. Dual Channel Memory Configuration Example 1](image1)

If additional memory is to be used, install another matched pair of DIMMs in DIMM 1 (black) in both channels A and B (see Figure 14).

![Figure 14. Dual Channel Memory Configuration Example 2](image2)
Three DIMMs

Install a matched pair of DIMMs equal in speed and size in DIMM 0 (blue) and DIMM 1 (black) of channel A. Install a DIMM equal in speed and total size of the DIMMs installed in channel A in either DIMM 0 or DIMM 1 of channel B (see Figure 15).

Figure 15. Dual Channel Memory Configuration Example 3

NOTE

All other memory configurations will result in single channel memory operation.
Installing DIMMs

⚠️ **CAUTION**

*Install memory in the DIMM sockets before installing a PCI Express x16 card to avoid interference with the memory retention mechanism.*

To make sure you have the correct DIMM, place it on the illustration of the DDR2 DIMM in Figure 16. All the notches should match with the DDR2 DIMM.

---

**Figure 16. Use DDR2 DIMMs**
To install DIMMs, follow these steps:
1. Observe the precautions in "Before You Begin" on page 25.
2. Turn off all peripheral devices connected to the computer. Turn off the computer and disconnect the AC power cord.
3. Remove the computer’s cover and locate the DIMM sockets (see Figure 17).
4. Remove the PCI Express card if it interferes with the DIMM retaining clips from being easily opened and closed.

5. Make sure the clips at either end of the DIMM socket(s) are pushed outward to the open position.
6. Holding the DIMM by the edges, remove it from its anti-static package.
7. Position the DIMM above the socket. Align the small notch at the bottom edge of the DIMM with the keys in the socket (see inset in Figure 17).
8. Insert the bottom edge of the DIMM into the socket.
9. When the DIMM is inserted, push down on the top edge of the DIMM until the retaining clips snap into place. Make sure the clips are firmly in place.
10. Reinstall the PCI Express x16 card if it was removed prior to installing the DIMMs.
11. Replace the computer’s cover and reconnect the AC power cord.

Figure 17. Installing a DIMM
Removing DIMMs

To remove a memory module, follow these steps:
1. Observe the precautions in "Before You Begin" on page 25.
2. Turn off all peripheral devices connected to the computer. Turn off the computer.
3. Remove the AC power cord from the computer.
4. Remove the computer’s cover.
5. Remove the PCI Express x16 card if it interferes with the DIMM clips from being easily opened and closed.
6. Gently spread the retaining clips at each end of the DIMM socket. The DIMM pops out of the socket.
7. Hold the DIMM by the edges, lift it away from the socket, and store it in an anti-static package.
8. Reinstall and reconnect any parts you removed or disconnected to reach the DIMM sockets.
9. Replace the computer’s cover and reconnect the AC power cord.

Installing and Removing a PCI Express x16 Card

CAUTION

When installing a PCI Express x16 card on the workstation board, ensure that the card is fully seated in the PCI Express x16 connector before you power on the system. If the card is not fully seated in the PCI Express x16 connector, an electrical short may result across the connector pins. Depending on the over-current protection of the power supply, certain board components and/or traces may be damaged.

The PCI Express x16 connectors on the workstation board have an integrated card retention mechanism (RM).
Installing a PCI Express x16 Card

If you are installing a single PCI Express Graphics card, install it in PCI Express connector 1 (see Figure 18, A) for optimum performance. However, if you are installing two PCI Express Graphics cards, install them in PCI Express connectors 1 and 2 (see Figure 18, B).

Follow these instructions to install any PCI Express x16 card:
1. Observe the precautions in "Before You Begin" on page 25.
2. Place the card in the PCI Express x16 connector.
3. Press down on the card until it is completely seated in the PCI Express x16 connector and the card retention notch snaps into place around the RM pin.
4. Secure the card’s metal bracket to the chassis back panel with a screw.
Follow these instructions to install any PCI Express x16 card:

5. Observe the precautions in "Before You Begin" on page 25.

6. Place the card in the PCI Express x16 connector (Figure 19, A) and press down on the card until it is completely seated in the connector and the card retention notch snaps into place around the RM pin.

7. Secure the card’s metal bracket to the chassis back panel with a screw (Figure 19, B).

Figure 19. Installing a PCI Express x16 Card
Removing the PCI Express x16 Card

Follow these instructions to remove the PCI Express x16 card from the RM:
1. Observe the precautions in "Before You Begin" on page 25.
2. Remove the screw that secures the card’s metal bracket to the chassis back panel (Figure 20, A).
3. Push down on the card ejector lever (Figure 20, B) to release the card from the connector.
4. Pull the card straight up (Figure 20, C).

---

![Figure 20. Removing the PCI Express x16 Card](image-url)
Connecting the IDE Cable

The IDE cable can be used to connect two drives to the workstation board. The cable supports the ATA-66/100 transfer protocol. Figure 21 shows the correct installation of the cable.

NOTE

ATA-66/100 compatible cables are backward compatible with drives using slower IDE transfer protocols. If an ATA-66/100 disk drive and a disk drive using any other IDE transfer protocol are attached to the same cable, the maximum transfer rate between the drives may be reduced to that of the slowest drive.

For correct function of the cable:
1. Observe the precautions in "Before You Begin" on page 25.
2. Attach the cable end with the single connector to the workstation board (Figure 21, A).
3. Attach the cable end with the two closely spaced connectors to the drives (Figure 21, B).
Connecting the Serial ATA Cable

The SATA cable (4-conductor) supports the Serial ATA protocol and connects a single drive to the workstation board. Either end of the cable can be connected to the SATA drive or the connector on the board.

For correct cable function:
1. Observe the precaution in "Before You Begin" on page 25.
2. Attach the locking cable end to the connector (Figure 22, A) on the board.
3. Attach the cable end without the lock to the drive (Figure 22, B).

Figure 22. Connecting Serial ATA Cables
Connecting Internal Headers

Before connecting cables to the internal headers, observe the precautions in "Before You Begin" on page 25.

Installing an External Serial ATA Adapter

If you are installing an external Serial ATA (eSATA) adapter to the desktop motherboard, follow these instructions (see Figure 24):

1. Observe the precautions in "Before You Begin" on page 25.
2. Attach the connector at the end of the adapter cable to the red SATA header on the desktop board.
3. Secure the metal bracket at the other end of the adapter to the chassis back panel with a screw.

Figure 24. Connecting an External Serial ATA Adapter
Connecting Chassis Fan Cables

Connect the chassis fan cables to the workstation board fan headers shown in Figure 25.

Figure 25. Location of Fan Headers
Connecting Power Supply Cables

NOTE

Failure to use the appropriate power supply and/or not connecting the 12 V (2x4) power connector to the workstation board may result in damage to the board or the system may not function properly.

The 2x12 main power connector on the workstation board is backwards compatible with ATX12V power supplies with 2x10 power connectors. Use of the 1x4 power connector is required with ATX12V power supplies with 2x10 connectors when using PCI Express cards that can consume up to 75 W. Figure 26 shows the location of the power connectors.

Figure 26. Connecting Power Supply Cables

1. Observe the precautions in "Before You Begin" on page 25.
2. Connect the 12 V processor core voltage power supply cable to the 2x4 connector. Use the 2x2 to 2x4 adapter if needed.
**NOTE**

*Do not use the 2x2 to 2x4 adapter when using an Intel® Pentium® processor Extreme Edition or a processor that is not running at its default settings. Doing so may result in damage to the workstation board.*

3. Connect the 1x4 power supply cable to the 1x4 connector.
4. Connect the main power supply cable to the 2x12 connector (see Figure 26).

### Other Connectors

Figure 27 shows the location of the other connectors on the workstation board.

**Figure 27. Location of Other Connectors**
Setting the BIOS Configuration Jumper

⚠️ **CAUTION**

Always turn off the power and unplug the power cord from the computer before changing the jumper. Moving the jumper with the power on may result in unreliable computer operation.

Figure 28 shows the location of the workstation board’s BIOS configuration jumper block.

---

Figure 28. Location of the BIOS Configuration Jumper Block

The three-pin BIOS configuration jumper block enables all board configurations to be done in the BIOS Setup program. Table 8 shows the jumper settings for the Setup program modes.

<table>
<thead>
<tr>
<th>Jumper Setting</th>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 2 1</td>
<td>Normal (default) (1-2)</td>
<td>The BIOS uses the current configuration and passwords for booting.</td>
</tr>
<tr>
<td>3 1 1</td>
<td>Configure (2-3)</td>
<td>After the Power-On Self-Test (POST) runs, the BIOS displays the Maintenance Menu. Use this menu to clear passwords.</td>
</tr>
<tr>
<td>3 1 1</td>
<td>Recovery (None)</td>
<td>The BIOS recovers data from a recovery diskette in the event of a failed BIOS update.</td>
</tr>
</tbody>
</table>
Clearing Passwords

This procedure assumes that the board is installed in the computer and the configuration jumper block is set to normal mode.

1. Observe the precautions in "Before You Begin" on page 25.
2. Turn off all peripheral devices connected to the computer. Turn off the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Find the configuration jumper block (see Figure 28).
5. Place the jumper on pins 2-3 as shown below.

```
  3   1
```
6. Replace the cover, plug in the computer, turn on the computer, and allow it to boot.
7. The computer starts the Setup program. Setup displays the Maintenance menu.
8. Use the arrow keys to select Clear Passwords. Press <Enter> and Setup displays a pop-up screen requesting that you confirm clearing the password. Select Yes and press <Enter>. Setup displays the maintenance menu again.
9. Press <F10> to save the current values and exit Setup.
10. Turn off the computer. Disconnect the computer’s power cord from the AC power source.
11. Remove the computer cover.
12. To restore normal operation, place the jumper on pins 1-2 as shown below.

```
  3   1
```
13. Replace the cover, plug in the computer, and turn it on.
NOTE

The line out connector, located on the back panel, is designed to power either headphones or amplified speakers only. Poor audio quality may occur if passive (non-amplified) speakers are connected to this output.

Figure 29 shows the back panel connectors.
Replacing the Battery

A coin-cell battery (CR2032) powers the real-time clock and CMOS memory. When the computer is not plugged into a wall socket, the battery has an estimated life of three years. When the computer is plugged in, the standby current from the power supply extends the life of the battery. The clock is accurate to ± 13 minutes/year at 25 °C with 3.3 VSB applied.

When the voltage drops below a certain level, the BIOS Setup program settings stored in CMOS RAM (for example, the date and time) might not be accurate. Replace the battery with an equivalent one. Figure 30 on page 57 shows the location of the battery.

⚠️ CAUTION
Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.

⚠️ PRECAUTION
Risque d’explosion si la pile usagée est remplacée par une pile de type incorrect. Les piles usagées doivent être recyclées dans la mesure du possible. La mise au rebut des piles usagées doit respecter les réglementations locales en vigueur en matière de protection de l’environnement.

⚠️ FORHOLDSREGEL

⚠️ OBS!
Det kan oppstå eksplosjonsfare hvis batteriet skiftes ut med feil type. Brukte batterier bør kastes i henhold til gjeldende miljølovgivning.

⚠️ Viktigt!
Risk för explosion om batteriet ersätts med felaktig batterityp. Batterier ska kasseras enligt de lokala miljövårdsbestämmelserna.

⚠️ VARO
Räjähdyvisaara, jos pariston tyyppi on väärrä. Paristot on kierrätettävää, jos se on mahdollista. Käytetyn pariston on hävitettävä paikallisten ympäristömääryysten mukaisesti.
VORSICHT

AVVERTIMENTO
Esiste il pericolo di un esplosione se la pila non viene sostituita in modo corretto. Utilizzare solo pile uguali o di tipo equivalente a quelle consigliate dal produttore. Per disfarsi delle pile usate, seguire le istruzioni del produttore.

PRECAUCIÓN
Existe peligro de explosión si la pila no se cambia de forma adecuada. Utilice solamente pilas iguales o del mismo tipo que las recomendadas por el fabricante del equipo. Para deshacerse de las pilas usadas, siga igualmente las instrucciones del fabricante.

WAARSCHUWING
Er bestaat ontploffingsgevaar als de batterij wordt vervangen door een onjuist type batterij. Batterijen moeten zoveel mogelijk worden gerecycled. Houd u bij het weggooien van gebruikte batterijen aan de plaatselijke milieuwetgeving.

ATENÇÃO
Haverá risco de explosão se a bateria for substituída por um tipo de bateria incorreto. As baterias devem ser recicladas nos locais apropriados. A eliminação de baterias usadas deve ser feita de acordo com as regulamentações ambientais da região.

AŚCIAROŻNĄŚĆ
Iснуе рызыка выбуху, калі заменены акумулятар неправільнага тыпу. Акумулятары павінны, па магчымасці, перапрацоўвацца. Пазбаўляцца ад старых акумулятараў патрэба згодна з мясцовым заканадаўствам на экалогіі.

VIGYÁZAT
Ha a telepet nem a megfelelő típusú telepre cseréli, az felrobbanhat. A telepeket lehetőség szerint újra kell hasznosítani. A használt telepeket a helyi környezetvédelmi előírásoknak megfelelően kell kiselejtezni.

AWAS

OSTRZEŻENIE
Istnieje niebezpieczeństwo wybuchu w przypadku zastosowania niewłaściwego typu baterii. Zużyte baterie należy w miarę możliwości utylizować zgodnie z odpowiednimi przepisami ochrony środowiska.

PRECAUŢIE
Risc de explozie, dacă bateria este înlocuită cu un tip de baterie necorespunzător. Bateriile trebuie reciclate, dacă este posibil. Depozitarea bateriilor uzate trebuie să respecte reglementările locale privind protecția mediului.

ВНИМАНИЕ
При использовании батареи несоответствующего типа существует риск ее взрыва. Батареи должны быть утилизированы по возможности. Утилизация батарей должна проводиться по правилам, соответствующим местным требованиям.

UPOZORNENIE
Ak batériu vymenite za nesprávny typ, hrozí nebezpečenstvo jej výbuchu. Batérie by sa mali podľa možnosti vždy recyklovať. Likvidácia použitých baterií sa musí vykonávať v súlade s miestnymi predpismi na ochranu životného prostredia.

POZOR
Zamenjava baterije z baterijo drugačnega tipa lahko povzroči eksplozijo. Če je mogoče, baterije reciklirajte. Rabljene baterije zavrzite v skladu z lokalnimi okoljevarstvenimi predpisi.
To replace the battery, follow these steps:

1. Observe the precautions in "Before You Begin" on page 25.
2. Turn off all peripheral devices connected to the computer. Disconnect the computer’s power cord from the AC power source (wall outlet or power adapter).
3. Remove the computer cover.
4. Locate the battery on the board (see Figure 30).
5. With a medium flat-bladed screwdriver, gently pry the battery free from its connector. Note the orientation of the “+” and “−” on the battery.
6. Install the new battery in the connector, orienting the “+” and “−” correctly.
7. Replace the computer cover.

Figure 30. Removing the Battery
3 BIOS

Accessing the BIOS Setup Program

The BIOS Setup program is accessed by pressing the F2 key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins (see Figure 31).

Figure 31. Accessing the BIOS Setup Program

For the latest BIOS Setup menu options, go to the Intel World Wide Web site: http://support.intel.com/support/motherboards/server/

Updating the BIOS

The BIOS can be updated by either using the Intel Express BIOS Update utility or the Iflash Memory Update utility.

Updating the BIOS with the Intel® Express BIOS Update Utility

With the Intel Express BIOS Update utility you can update the system BIOS while in the Windows environment. The BIOS file is included in an automated update utility that combines the functionality of the Intel® Flash Memory Update Utility and the ease-of-use of Windows-based installation wizards.

To update the BIOS with the Intel Express BIOS Update utility:

3. Download the file to your hard drive. (You can also save this file to a diskette. This is useful if you are updating the BIOS for multiple identical systems.)

4. Close all other applications. This step is required. Your system will be rebooted at the last Express BIOS Update window.
5. Double-click the executable file from the location on your hard drive where it was saved. This runs the update program.
6. Follow the instructions provided in the dialog boxes to complete the BIOS update.

**Updating the BIOS with the Iflash Memory Update Utility**

With the Iflash BIOS update utility you can update the system BIOS from a diskette or other bootable media. The utility available from the Web provides a simple method for creating a bootable flash memory update diskette that will automatically update your BIOS.

**Obtaining the BIOS Update File**

You can update to a new version of the BIOS by using the BIOS update file. The BIOS update file is a compressed self-extracting archive that contains all the files you need to update the BIOS. The BIOS update file contains:

- New BIOS files
- BIOS recovery files
- Intel Flash Memory Update Utility

You can obtain the BIOS update file through your computer supplier or by navigating to the Workstation Board S975XBX2 page on the Intel World Wide Web site at: [http://support.intel.com/support/motherboards/server/](http://support.intel.com/support/motherboards/server/)

Navigate to the S975XBX2 page, click “[view] Latest BIOS updates,” and select the Iflash BIOS Update utility file.

**NOTE**

*Review the instructions distributed with the update utility before attempting a BIOS update.*

The Iflash Memory Update utility allows you to:

- Update the BIOS in flash memory
- Update the language section of the BIOS

**Updating the BIOS**

**CAUTION**

*The AUTOEXEC.BAT file provided with the update files updates the BIOS. Do not interrupt the process or the system may not function.*

1. Boot the computer with the BIOS update diskette in drive A. During system boot, the AUTOEXEC.BAT file provided with the update files will automatically run the BIOS update process.
2. When the update process is complete, the monitor will display a message telling you to remove the diskette and to reboot the system.
3. As the computer boots, check the BIOS identifier (version number) to make sure the update was successful. If a logo appears, press <Esc> to view the POST messages.

Recovering the BIOS

It is unlikely that anything will interrupt the BIOS update; however, if an interruption occurs, the BIOS could be damaged. The following steps explain how to recover the BIOS if an update fails. The following procedure uses recovery mode for the Setup program. See page 51 for more information on Setup modes.

**NOTE**

*Because of the small amount of code available in the boot block area, there is no video support. You will not see anything on the screen during this procedure. Monitor the procedure by listening to the speaker and looking at the diskette drive LED.*

1. Turn off the computer, disconnect the computer’s power cord, and disconnect all external peripherals.
2. Remove the computer cover and locate the configuration jumper block (see Figure 28).
3. Remove the jumper from all pins as shown below to set recovery mode for Setup.

   ![Jumper Configuration](image)

4. Insert the bootable BIOS update diskette into diskette drive A.
5. Replace the computer cover, connect the power cord, turn on the computer, and allow it to boot. The recovery process will take a few minutes.
6. Listen to the speaker:
   - Upon applying power, drive A will begin to show activity. In about a minute, two beeps are heard and drive A activity ceases (temporarily) indicating the successful recovery of the BIOS core. Drive A activity will begin again followed by two more beeps indicating the successful recovery of the boot block. This sequence of events indicates a successful BIOS recovery.
   - A series of continuous beeps indicates a failed BIOS recovery.
7. If recovery fails, return to step 1 and repeat the recovery process.
8. If recovery is successful, turn off the computer, and disconnect its power cord.
9. Remove the computer cover and continue with the following steps.
10. On the jumper block, reinstall the jumper back on pins 1-2 as shown below to set normal mode for Setup.

   ![Jumper Configuration](image)

11. Leave the update diskette in drive A, replace the computer cover, and connect the computer’s power cord.
12. Turn on the computer and continue with the BIOS update.
4 Configuring for RAID (Intel® Matrix Storage Technology)
Requires Microsoft Windows® XP or 2000 and SATA Hard Drive(s)

Configuring the BIOS for Intel Matrix Storage Technology

1. Assemble your system and attach two or more SATA hard drives to the black SATA connectors.
2. Enter system BIOS Setup by pressing the <F2> key after the Power-On-Self-Test (POST) memory tests begin.
3. Go to Advanced → Drive Configuration → Configure SATA as; ensure that RAID is selected.
4. Then save your settings by pressing <F10>.

Creating Your RAID Set

1. Upon re-boot, you will see the following Intel® Matrix Storage Manager option ROM status message on the screen: Press <Ctrl-I> to enter the RAID Configuration Utility. Press <Ctrl-I> and enter the RAID Configuration Utility.
2. In the Intel Matrix Storage Manager option ROM Main Menu, select option #1: Create RAID Volume. Enter a volume name and press <Enter>.
   NOTE: The RAID Volume name must be in English alphanumeric ASCII characters.
3. Use the arrow keys to select RAID 0 or RAID 1 (if only two SATA drives are available), RAID 5 and RAID 10 (these options will only appear if three or four SATA drives are installed respectively). Press <Enter> once you have selected the RAID LEVEL.
4. Select the drives to be used in the RAID array (only if there are more than two drives available) and press <Enter>.
5. Select the strip size, if necessary, and press <Enter>.
6. Enter the size of the volume (if you enter less than the maximum volume size, you can then create a second RAID array on the remaining portion of your volume) and press <Enter>.
7. Finally, press <Enter> to Create Volume.
8. Exit the Option ROM user interface by pressing <Esc> or going to the EXIT option in the MAIN MENU.
Loading the Intel Matrix Storage Technology RAID Drivers and Software

1. Begin Windows Setup by booting from the Windows installation CD.
2. At the beginning of Windows Setup, press <F6> to install a third-party SCSI or RAID driver. When prompted, insert the diskette labeled Intel Matrix Storage Technology RAID Driver. Install the Intel® 82801GR SATA RAID Controller driver.
3. Finish the Windows installation and install all necessary drivers.
4. Install the Intel Matrix Storage Console software via the Intel Express Installer CD included with your workstation board or after downloading it from the Internet at http://support.intel.com/support/motherboards/server/. The Intel Matrix Storage Console software can be used to manage the RAID configuration.

Setting Up a “RAID Ready” System

The Intel Matrix Storage Technology Console software offers the flexibility to upgrade from a single Serial ATA drive to RAID without reinstalling the operating system, when a second SATA hard drive is added to the system.

Follow the steps described in the headings from this section: "Configuring the BIOS for Intel Matrix Storage Technology" and "Loading the Intel Matrix Storage Technology RAID Drivers and Software".

Once additional SATA drives have been added, open the Intel Matrix Storage Technology Console Software and follow the directions to update to a RAID setup.
A Error Messages and Indicators

Workstation Board S975XBX2 reports POST errors in two ways:
- By sounding a beep code
- By displaying an error message on the monitor

BIOS Beep Codes

The BIOS beep codes are listed in Table 9. The BIOS also issues a beep code (one long tone followed by two short tones) during POST if the video configuration fails (a faulty graphics card or no card installed) or if an external ROM module does not properly checksum to zero.

Table 9. Beep Codes

<table>
<thead>
<tr>
<th>Beep</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>No memory</td>
</tr>
<tr>
<td>Siren</td>
<td>Processor overheat (on reboot)</td>
</tr>
</tbody>
</table>

BIOS Error Messages

When a recoverable error occurs during the POST, the BIOS displays an error message describing the problem.

Table 10. BIOS Error Messages

<table>
<thead>
<tr>
<th>Error Message</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROCESSOR_THERMAL_TRIP_ERROR</td>
<td>Processor was previously shut down due to a thermal event (overheating).</td>

</tr>
<tr>
<td>MEMORY_SIZE_DECREASE_ERROR</td>
<td>The firmware has detected that the system memory has decreased.</td>
</tr>
<tr>
<td>INTRUDER_DETECTION_ERROR</td>
<td>The system chassis was opened.</td>
</tr>
<tr>
<td>SPD_TOLER_ERROR</td>
<td>SERIAL PRESENCE DETECT (SPD) device data missing or inconclusive. Properly programmed SPD device data is required for reliable operation. DDR2 533 MHz memory assumed at slowest timings.</td>
</tr>
<tr>
<td>MEM_OPTIMAL_ERROR</td>
<td>The installed amount of memory in Channel A is not equal to the amount of memory in Channel B. Maximum memory performance is achieved with equal amounts of memory installed in each channel.</td>
</tr>
</tbody>
</table>
B Regulatory Compliance

This appendix contains the following regulatory compliance information for Workstation Board S975XBX2:

- Safety regulations
- European Union Declaration of Conformity statement
- Product Ecology statements
- Electromagnetic Compatibility (EMC) regulations
- Product certifications

Safety Regulations

Workstation Board S975XBX2 complies with the safety regulations stated in Table 11 when correctly installed in a compatible host system.

Table 11. Safety Regulations

Place Battery Marking

There is insufficient space on this workstation board to provide instructions for replacing and disposing of the Lithium ion coin cell battery. For system safety certification, the statement below or an equivalent statement is required to be permanently and legibly marked on the chassis near the battery.

⚠️ CAUTION

Risk of explosion if the battery is replaced with an incorrect type. Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.

Related Links

For information about replacing the battery, go to page 54.
European Union Declaration of Conformity Statement

The product is properly CE marked demonstrating this conformity and is for distribution within all member states of the EU with no restrictions.

This product follows the provisions of the European Directives 89/336/EEC and 73/23/EEC.

Čeština Tento výrobek odpovídá požadavkům evropských směrnic 89/336/EEC a 73/23/EEC.

Dansk Dette produkt er i overensstemmelse med det europæiske direktiv 89/336/EEC & 73/23/EEC.

Dutch Dit product is in navolging van de bepalingen van Europese Directief 89/336/EEC & 73/23/EEC.

Français Ce produit est conforme aux exigences de la Directive Européenne 89/336/EEC & 73/23/EEC.

Slovenščina Izdelek je skladen z določbami evropskih direktiv 89/336/EGS in 73/23/EGS.
Product Ecology Statements

The following information is provided to address worldwide product ecology concerns and regulations.

Recycling Considerations

As part of its commitment to environmental responsibility, Intel has implemented the Intel Product Recycling Program to allow retail consumers of Intel’s branded products to return used products to select locations for proper recycling.

Please consult the http://www.intel.com/intel/other/ehs/product_ecology/Recycling_Program.htm for the details of this program, including the scope of covered products, available locations, shipping instructions, terms and conditions, etc.
Dans le cadre de son engagement pour la protection de l'environnement, Intel a mis en œuvre le programme Intel Product Recycling Program (Programme de recyclage des produits Intel) pour permettre aux consommateurs de produits Intel de recycler les produits usés en les retournant à des adresses spécifiées.

Visitez la page Web http://www.intel.com/intel/other/ehs/product_ecology/Recycling_Program.htm pour en savoir plus sur ce programme, à savoir les produits concernés, les adresses disponibles, les instructions d'expédition, les conditions générales, etc.
Lead-Free Workstation Board

This workstation board is lead free although certain discrete components used on the board contain a small amount of lead which is necessary for component performance and/or reliability. This workstation board is referred to as “Lead-free second level interconnect.” The board substrate and the solder connections from the board to the components (second-level connections) are all lead free. Table 12 shows the various forms of the “Lead-Free 2nd Level Interconnect” mark as it appears on the board and accompanying collateral.

**Table 12. Lead-Free Board Markings**

<table>
<thead>
<tr>
<th>Description</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Lead-Free 2nd Level Interconnect:</strong> This symbol is used to identify electrical and electronic assemblies and components in which the lead (Pb) concentration level in the workstation board substrate and the solder connections from the board to the components (second-level interconnect) is not greater than 0.1% by weight (1000 ppm).</td>
<td>![2nd Level Interconnect mark] or ![2nd lvl Intct mark] or ![2LI mark]</td>
</tr>
</tbody>
</table>
EMC Regulations

Workstation Board S975XBX2 complies with the EMC regulations stated in Table 13 when correctly installed in a compatible host system.

Table 13. EMC Regulations

<table>
<thead>
<tr>
<th>Regulation</th>

<td>Voluntary Control for Interference by Information Technology Equipment (Japan)</td>
</tr>
</tbody>
</table>
Japanese Kanji statement translation: This is a Class B product based on the standard of the Voluntary Control Council for Interference from Information Technology Equipment (VCCI). If this is used near a radio or television receiver in a domestic environment, it may cause radio interference. Install and use the equipment according to the instruction manual.

Korean Class B statement translation: This is household equipment that is certified to comply with EMC requirements. You may use this equipment in residential environments and other non-residential environments.

Ensure Electromagnetic Compatibility (EMC) Compliance

Before computer integration, make sure that the power supply and other modules or peripherals, as applicable, have passed Class B EMC testing and are marked accordingly.

Pay close attention to the following when reading the installation instructions for the host chassis, power supply, and other modules:

- Product certifications or lack of certifications
- External I/O cable shielding and filtering
- Mounting, grounding, and bonding requirements
- Keying connectors when mating the wrong connectors could be hazardous

If the power supply and other modules or peripherals, as applicable, are not Class B EMC compliant before integration, then EMC testing may be required on a representative sample of the newly completed computer.
Product Certifications

Board-Level Certification Markings

Workstation Board S975XBX2 has the following product certification markings:

Table 14. Product Certification Markings

<table>
<thead>
<tr>
<th>Description</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>UL joint US/Canada Recognized Component mark. Includes adjacent UL file number for Intel workstation boards: E210882.</td>

</tr>
</tbody>
</table>
Chassis and Component Certifications

Ensure that the chassis and certain components; such as the power supply, peripheral drives, wiring, and cables; are components certified for the country or market where used. Agency certification marks on the product are proof of certification. Typical product certifications include:

In Europe
The CE marking signifies compliance with all applicable European requirements. If the chassis and other components are not properly CE marked, a supplier’s Declaration of Conformity statement to the European EMC directive and Low Voltage directive (as applicable), should be obtained. Additionally, other directives, such as the Radio and Telecommunications Terminal Equipment (R&TTE) directive may also apply depending on product features.

In the United States
A certification mark by a Nationally Recognized Testing Laboratory (NRTL) such as UL, CSA, or ETL signifies compliance with safety requirements. Wiring and cables must also be UL listed or recognized and suitable for the intended use. The FCC Class B logo for home or office use signifies compliance with electromagnetic interference (EMI) requirements.

In Canada
A nationally recognized certification mark such as CSA or cUL signifies compliance with safety requirements. The Industry Canada statement at the front of this product guide demonstrates compliance with Canadian EMC regulations.
