

Intel Unison – Seamlessly Connects Your PC and Devices

Unlock your connected world and enjoy the freedom to work across operating systems, exclusively on Intel Evo designs.

Sept. 27, 2022 — Intel Corporation today announced Intel® Unison™, a software solution that brings together devices, operating systems and form factors to create one integrated experience. This true cross-platform experience will provide the Windows ecosystem a multidevice experience that does not require the user to make any device choice compromises as it is compatible with both Android and iOS phones. Based on the technology of Screenovate, a software company that was acquired by Intel late last year, Intel Unison will start rolling out to the market on select 12th Gen Intel® Core™ processor-based Intel® Evo™ designs this holiday season. Early designs will be made available from Acer, HP and Lenovo. The distribution will expand to additional Intel Evo designs early next year with the market availability of 13th Gen Intel® Core™ devices.
